Collabnet Continuum is an enterprise-class software planning and delivery platform that unifies Agile and DevOps lifecycle management to accelerate delivery, increase agility, and ensure alignment between business and IT.

Feature Comparison

Value Stream Management

GitLab will surface VSM (value stream management) style metrics, such as cycle time, lead time, and deployment frequency, so users can easily see what is happening across the organization.
Audit Events

To maintain the integrity of your code, GitLab Premium gives admins the ability to view any modifications made within the GitLab server in an advanced audit event system, so you can control, analyze and track every change.

Learn more about Audit Events

Auditor users

Auditor users are users who are given read-only access to all projects, groups, and other resources on the GitLab instance.

DevOps Score

Accelerate idea-to-production by identifying areas of improvement in your entire development process. See how you compare to other organizations using GitLab.
