

Capabilities Statement

A Single Application built from the ground up for the complete Software Development Lifecycle

Modernizing government IT can unlock tremendous value and more and more agencies are moving to both enterprise DevOps and Cloud-native DevOps. Speed-to-delivery of application development, and lowering costs for development, testing, and operations, are at the forefront of meeting one's mission goals. DevOps is the automation of agile methodology and the most efficient approach to software delivery.

Visible

REAL TIME VIEW ACROSS THE ENTIRE LIFECYCLE

- » See everything that matters
- » Stay in your flow
- » Don't wait on syncing
- » Manage projects, not tools
- » Improve cycle time

Efficient

COLLABORATE WITHOUT WAITING

- » Start immediately
- » Work concurrently
- » No more handoffs

Governed

DEVELOP AND OPERATE WITH CONFIDENCE

- » Security and compliance already built-in
- » Simplify user management
- » Expedite auditing
- » Act with certainty

The most efficient approach to software delivery

PLAN → Get your best ideas into development.

Whether you use Waterfall, Agile, or Conversational Development. Visualize, prioritize, coordinate, and track your progress your way with GitLab's flexible project management tools.

CREATE → Securely write and manage code and project data.

Consolidate source code into a single DVCS. GitLab's git repositories come complete with branching tools and access controls, providing a scalable, single source of truth for collaborating on projects and code.

VERIFY → Ship better software, faster.

Spot errors sooner and shorten feedback cycles with built-in code review, code testing, code quality, and review apps. Customize your approval workflow controls, automatically test the quality of your code, and spin up a staging environment for every code change.

PACKAGE → Manage custom container images with ease.

GitLab Container Registry gives you the enhanced security and access controls of custom Docker

images without 3rd party add-ons. Easily upload and download images from GitLab CI with full Git repository management integration.

RELEASE → Minimize complexity with built-in Continuous Delivery.

Whether you're deploying to one server or thousands, build, test, and release your code confidently and securely with GitLab's built-in continuous delivery and deployment.

CONFIGURE → Automate configuration management.

Best practice templates get you started with minimal to zero configuration. Then customize everything from buildpacks to CI/CD.

MONITOR → Analyze shipping velocity and monitor application performance.

Ensure your applications are always responsive and available. GitLab collects and displays performance metrics for deployed apps using Prometheus so you can know in an instant how code changes impact your production environment.

Security & Compliance

With embedded automated security, code quality, vulnerability management, and policy enforcement that is always on, accessible, and accurate, every important activity is logged in one single audit log that covers the entire software development lifecycle.

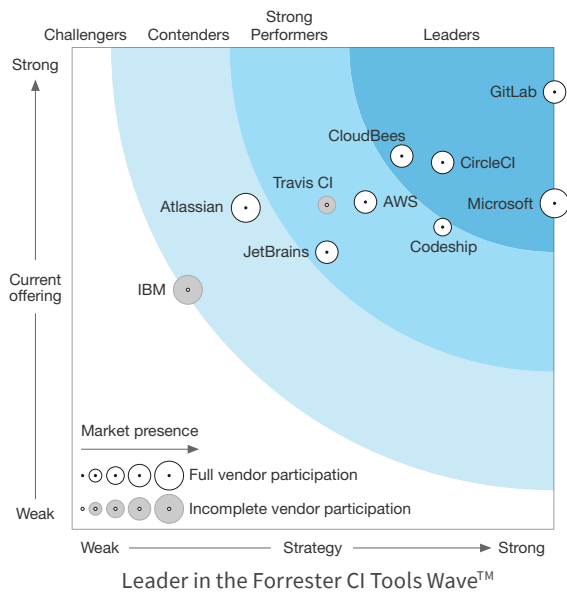

Visibility & Governance

A single source of truth across the lifecycle provides you complete real-time metrics, visibility and governance for all your projects across the entire software development lifecycle.

Predictability

GitLab provides an up-to-date and accurate view and understanding of cycle time patterns across all projects and activities from a single interface. Frequent decision points allow teams to pinpoint bottlenecks and allocate resources and efforts according to business priorities leading to predictable outcomes.

Recognized by Forrester as a leader in the Forrester CI Tools Wave™

Used by over 100,000 organizations and millions of users, GitLab is the leading open source code collaboration platform that covers 100% of your software delivery pipeline.
