

Concurrent DevOps

A single application for the complete DevOps lifecycle

Visible

REAL TIME VIEW ACROSS THE ENTIRE LIFECYCLE

- » See everything that matters
- » Stay in your flow
- » Don't wait on syncing
- » Manage projects, not tools
- » Improve cycle time

Efficient

COLLABORATE WITHOUT WAITING

- » Start immediately
- » Work concurrently
- » No more handoffs

Governed

DEVELOP AND OPERATE WITH CONFIDENCE

- » Security and compliance already built-in
- » Simplify user management
- » Expedite auditing
- » Act with certainty

GitLab is the first single application built from the ground up for all stages of the DevOps lifecycle for Product, Development, QA, Security, and Operations teams to work concurrently on the same project. GitLab enables teams to collaborate and work from a single conversation, instead of managing multiple threads across disparate tools. GitLab provides teams a single data store, one user interface, and one permission model across the DevOps lifecycle allowing teams to collaborate, significantly reducing cycle time and focus exclusively on building great software quickly.

PLAN → Get your best ideas into development.

Whether you use Waterfall, Agile, or Conversational Development, GitLab streamlines your collaborative workflows. Visualize, prioritize, coordinate, and track your progress your way with GitLab's flexible project management tools.

CREATE → Securely write and manage code and project data.

Consolidate source code into a single DVCS that's easily managed and controlled without disrupting your workflow. GitLab's git repositories come complete with branching tools and access controls, providing a scalable, single source of truth for collaborating on projects and code.

VERIFY → Ship better software, faster.

Spot errors sooner and shorten feedback cycles with built-in code review, code testing, code quality, and review apps. Customize your approval workflow controls, automatically test the quality of your code, and spin up a staging environment for every code change. GitLab Continuous Integration is the most popular next generation testing system that auto scales to run your tests faster.

PACKAGE → Manage custom container images with ease.

GitLab Container Registry gives you the enhanced

security and access controls of custom Docker images without 3rd party add-ons. Easily upload and download images from GitLab CI with full Git repository management integration.

RELEASE → Minimize complexity with built-in Continuous Delivery.

Spend less time configuring your tools, and more time creating. Whether you're deploying to one server or thousands, build, test, and release your code confidently and securely with GitLab's built-in continuous delivery and deployment.

CONFIGURE → Automate configuration management.

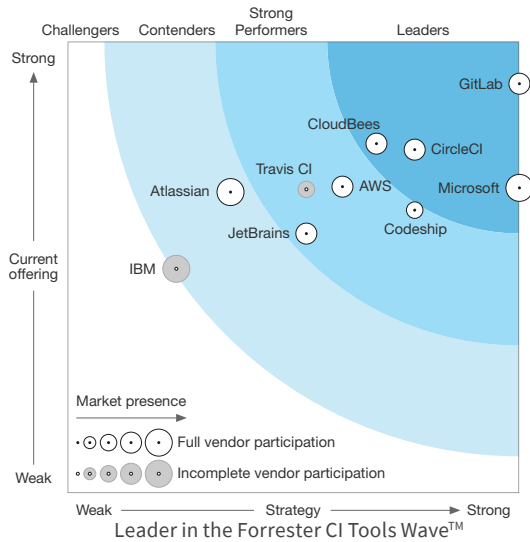

Automate your entire workflow from build to deploy and monitoring with GitLab Auto Devops. Best practice templates get you started with minimal to zero configuration. Then customize everything from buildpacks to CI/CD.

MONITOR → Analyze shipping velocity and monitor application performance.

Measure how long it takes to go from planning to monitoring and ensure your applications are always responsive and available. GitLab collects and displays performance metrics for deployed apps using Prometheus so you can know in an instant how code changes impact your production environment.

How can GitLab be best of breed in 10 product categories?

BUILT ON OPEN SOURCE

The power of convention: leverage the DevOps best practices of 100K+ organizations across the world.

Everyone can contribute: passionate, vocal, global community of 1800+ people and organizations contribute code.

Co-creation: with thousands of public feature proposals, GitLab delivers customer-driven innovation.

Continuous innovation: since 2011 GitLab has consistently released new features/innovations on the 22nd of every month.

Open eco-system: built upon powerful open source technologies like Kubernetes and Prometheus.

Open Core and Continuously Improved

With major product releases every 22nd of the month, GitLab's high-velocity pace of innovation is possible because of the collaboration of the GitLab community, delivering the leading modern software development product, built for today's modern software developer.

Why choose GitLab?

Built on Open Source, GitLab leverages the community contributions of thousands of developers and millions of users to continuously deliver new DevOps innovations. More than 100,000 organizations from startups to global enterprise organizations, including Ticketmaster, ING, NASDAQ, Alibaba, Sony, and Intel trust GitLab to deliver great software at new speeds.
